ASSESSING MULTIPLE FACILITIES IS A NATURAL FIT FOR THP

Cincinnati, Ohio – Quantity and Quality. These are the two words that drove THP to being selected for the recent University of Akron Parking Deck Repairs 2011 project. THP has twenty-seven years of experience consulting and engineering for higher education and healthcare providers, municipalities and private corporations who own and operate multiple parking facilities. These clients are located throughout the country.

The University of Akron, home of the Zips, recently awarded THP the Structural Engineer assignment to provide assessment, repair development and construction administration of **eight parking garages** on its Akron, Ohio campus. THP successfully demonstrated its parking garage engineering capabilities, creative assessment approach for multiple facilities and value to the University. The project is underway and expected to be completed on time for the University's August 2011 deadline.

If you need THP to provide parking garage consulting for your next new garage or garage restoration project, contact John Wellinger at 614-448-7890 or jwellinger@thpltd.com. Visit THP online at www.thpltd.com.
